

Return-on-Investment Analysis

Overview

We know our services save you time and money – and we prove it.

A component of our detailed project specification is working with you to develop metrics for calculating Return-On-Investment. Within a reasonable time of project implementation, one of our team members spends from half a day to two days analyzing how the project performs. We then document the improved process as a business case study and provide you with solid proof of the project's ROI.

Deliverables

Overview

Background information and a brief description of the problem/opportunity.

Solution(s)

Solutions expected as result of implementation of services.

Expected Business Value Outputs and Measurable(s):

Metrics defined and benchmarks identified for measuring process improvements. Benefits quantified with fixing the problem.

New Processes

Documentation of changes to the current system(s).

Results

Specific quantifiable impact/benefits tied back to each pre-defined measurable, as a result of system changes on each relevant function of the business and the business overall.

Bridging business processes and information systems
